Silver Spring, MD 20910-3283

DATE

May 07, 2001

When no flooding occurs, include miscellaneous river conditions, such as significant rises, record low stages, ice conditions, snow cover, droughts, and hydrologic products issued (WSOM E-41).

☒ No flood stages were reached in this HSA for the month above.

Rainfall for the month of April was below normal for much of the HSA. Widespread showers and thunderstorms on the 10th produced amounts of 1/4 inch to 1/2 inch over much of the HSA...with locally heavy areas up to 2 inches. Very heavy rains of 2 to 6 inches on the 16th and 17th in western Irion and Scheicher Counties produced river rises on the Middle Concho River. This fed 2000 acre feet of water into the Twin Buttes Reservoir near San Angelo. Overnight on the 22nd...heavy rainfall fell southeast of an Abilene...San Angelo....Ozona line. Amounts of 1/2 to 1 inch were common...with some areas receiving 3 inches. Only slight rises were seen on rivers however.

For the month of April, San Angelo received 0.82 inches of rain. This is 0.85 inches below normal for the month. For the year so far, San Angelo has received 5.54 inches of rainfall, which is 1.09 inches above normal. Abilene received 0.57 inches of rain in April, which is 1.33 inches below normal. For the year so far, Abilene has received 6.26 inches of rainfall. This is 0.81 inches above normal.
